Prof. Jeroen A. van Bokhoven is associate professor for Heterogeneous Catalysis at ETH Zürich and Head of Laboratory of Catalysis and Sustainable Chemistry at Paul Scherrer Institute since April 2010. He received his PhD from Utrecht University in 2000.

He was researcher at the Debye Institute of the Utrecht University from 1999 to 2002 and at ETH Zurich at the Institute for Chemical and Bioengineering from 2002 to 2006. In 2006 he received a professorship from the Swiss National Science Foundations at the same institution.

His work involves the synthesis, characterization, and application of heterogeneous catalysts and the development and application of novel characterization tools to identify the structure of active sites and reaction mechanisms in heterogeneous catalysis.

The publications of Prof. van Bokhoven (more than 400 have been published so far) have been cited more than 13000-times. His *h*-index is 64.
