Prof. Dr. Hubert Gasteiger received his Ph.D. in Chemical Engineering from UC Berkeley (1993) and was postdoctoral fellow at the Lawrence Berkeley National Laboratory (1994–1995) and Ulm University (1996–1998). Subsequently, he led the development of catalysts and membrane electrode assemblies in the fuel cell program of GM/Opel in the US (1999-2007). After a one year Visiting Professorship at MIT with the group of Yang Shao-Horn, he became full professor in the Chemistry Department of the Technical University of Munich (2010). There he founded the Chair of Technical Electrochemistry, focusing on the development of materials, electrodes, and diagnostics for fuel cells, electrolyzers, and batteries. He was editor of Wiley's Handbook of Fuel Cells, holds 23 patents, and published 230 refereed articles; 2019-2021 he was listed as Highly Cited Researcher (Web of Science). He is Fellow of the International Society of Electrochemistry (ISE) and of the Electrochemical Society (ECS); he recently received the Vittorio de Nora (2020) and the Battery Division Research Award (2020) from the ECS.
