Prof. Dr. David Sarlah was born and raised in Slovenia, where he obtained his Bachelor's Degree in Chemistry (University of Ljubljana). He obtained his Ph.D. in chemistry with Prof. K. C. Nicolaou involving the total synthesis of complex natural products. David then joined Prof. Erick M. Carreira's group at ETH as a postdoctoral fellow and explored the field of asymmetric catalysis. In the fall of 2014 David joined the faculty at the University of Illinois, Urbana-Champaign. His research interests span from the synthesis of complex, biologically active natural products and the related chemical biology to methodology development.
