

KEMIJSKI INŠTITUT

Vabilo na Forum40 / Invitation to the Forum40

Dr. Mitja Križman

D06, Department of Food Chemistry

Četrtek / Thursday, 5.3.2020 ob / at 13:00

Velika predavalnica Kemijskega inštituta / Great Lecture Hall,
National Institute of Chemistry, Hajdrihova 19, Ljubljana

A brief excursion into cannabinoid chemistry: phytomedical aspects and analytical tools

The interest in the therapeutic potential of cannabinoids has been recognised since antiquity, and it has been renewed a few decades ago. Only in the last decade, however, the cannabinoids became extremely popular in the medical and cosmetic context. A great variety of cannabinoid-related products has therefore found their way to the market. Accordingly, with the increasing concern about safety and quality control of such products, many analytical applications have been developed. An overview of different analytical methodologies will be given, with their relative strengths and weaknesses, and their practicality.

Vljudno vabljeni / Kindly invited
